

Single point of search. Global data access.

Find all of your content in one place. Our Federated Search Extension allows users to enter one search query and bring content back from multiple Voyager instances regardless of where that content resides—across the hall, across the country or around the world. Once indexed, all disparate content repositories can be searched simultaneously enabling users to find the data they need, when they need it.

Voyager's Federated Search

Voyager

Voyager Federated Search Features

A Single Point of Search Across Multiple Indices

Link together multiple indices and view them within a single Voyager application.

Avoid Content Duplication

No need to duplicate content to allow users in different places to find it.

No Costly Data Migration

Voyager creates a digital card catalog of your content, leaving content where it is.

Find Content Fast

With Solr/Lucene under the hood, Voyager delivers super fast results, autocomplete, keyword and wildcard searches.

Keep Content Secure

Administrators maintain control of who has access to what.

Discover Everything

Regardless of where data resides, access any of the 1800+ spatial and non-spatial formats Voyager supports.

No Change in Workflow

Voyager's Federated Search Extension fits into your existing infrastructure.

Retain Relevancy Settings

Query settings remain the same so that the most relevant search results are returned.

Comes Standard with Voyager Pro License

Enjoy Federated Search with a Pro License or purchase as an extension to Voyager Basic.
