Introducing Vose
The Future of Smart Spatial Search

The newest addition to, and next evolution of, Smart Spatial Search. Vose delivers a decentralized, highly scalable solution that has been designed from the ground up to meet the high speed and high volume search solutions that our customers rely on.

Voyager Search specializes in smart spatial search solutions. The company’s off-the-shelf enterprise search platform combines best-of-breed search and spatial technologies into a single, robust, and intuitive search and data management solution. The company’s family of products work together to create an index of an organization’s data and allows customers to then enrich that data, manage it, and make it searchable and easily accessible from a single point of search. By incorporating spatial technology into the solution, Voyager Search provides unique features for organizations that rely on and use location-based data.

Connect Anything, Anywhere
Voyager connects and makes searchable all of your content, regardless of where it resides. *Where do you store yours?*
What's Included?

Vose features two entirely new applications, more Machine Learning and Artificial Intelligence capabilities, the Flex Index to support large-scale deployments and all of the capabilities in the existing Voyager Server licenses. Vose has been developed to allow customers to index more data and to do it faster. By separating resource-intensive processes, deployments at scale have become far more efficient.

**Flex Index**

The next generation of our search index built for scalability and reliability. A single logical index that, behind the scenes, is physically split up and deployed across a cluster of machines.

- Is massively scalable
- Has built-in replication of index data offers redundancy and fault tolerance features to ensure the search index is always up and in a healthy state
- Can handle thousands of simultaneous requests
- Can scale to include as many documents as you need

**Agents**

Remote workers that scale up your indexing capacity.

- Easily increase indexing capacity by adding more Agents to fit your needs
- Agents ingest your content, enrich it and then send to the Flex Index

**HQ**

Our new headquarters for managing discovery.

- A more streamlined experience for managing and enriching your content
- Includes an expanded set of highly extensible, newly crafted and updated connectors for indexing your content
- HQ makes adding custom connectors easier

**New and Improved Pipeline**

Enriching, transforming, and harmonizing your content for the best search experience has never been easier.

- We’ve rearchitected and streamlined the entire pipeline process
- Adding custom pipeline steps has become easier than ever

Our end user interface has been updated with new features that allow users to more easily discover the data they need.

- Optional taxonomy display
- Improved tools management
- Streamlined search bar
- New summary search results display

**Smarter Spatial Search**

Machine Learning and Artificial Intelligence provide a smarter, more efficient search experience. And, all of these features can be tuned to your content so results are as relevant as possible every single time.

- Entity extraction pulls out key terms from your content and can be used to group related items into taxonomies, filters, or geotags
- Query Expansion feature broadens returns on your search results so you don’t miss out on anything
- Find Similar brings back content related to your search so you can more easily find what you need
- Did You Mean helps with that tricky spelling — is it Cincinnati or Cincinnatti?
- Query Suggestion, or as-you-type autocomplete, reduces the amount of typing a user needs to do and helps develop the best search by suggesting queries that will provide the most relevant results

Vose includes all of this as well as the features of all of our extensions and Voyager Server Pro.

It’s smart spatial search, simplified.
