

Have it Your Way

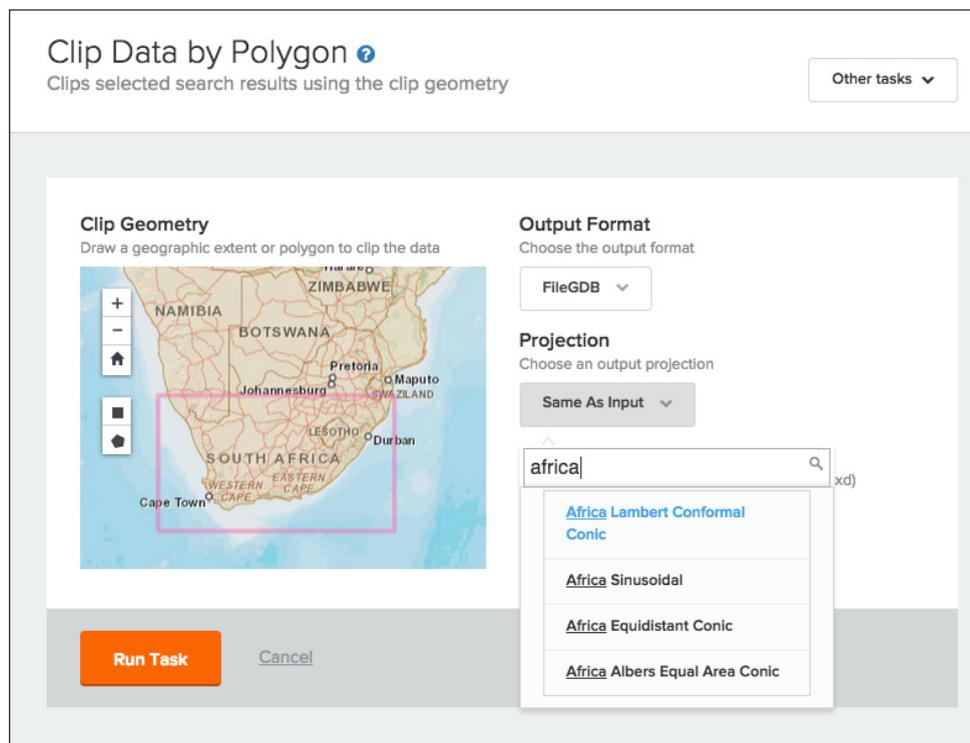

Voyager can find everything in an organization, anywhere it's stored.

Most search engines would stop right there, but we understand that once your customers find the document they need, they almost always want to get it. Open data portals that put an employee between your customers and the content they need, create a huge workload for employees, delays for customers, and a big expense for the organization.

Voyager's processing framework gives customers the power to help themselves. It allows your customers to download content they need in the way they need it, all the while respecting your security limits.

Expect a radical increase in smiles.

Geoprocessing Framework Delivers

www.voyagersearch.com

Voyager

Voyager Geoprocessing Users Can...

Clip Data

Clips selected search results using the clip geometry and can convert it into another format before zipping it up for download.

Zip Files

Compresses input files into a single zip file.

Convert to KML

Converts feature or raster data into Keyhole Markup Language for use in ArcGIS Explorer, ArcGlobe, and Google Earth.

Create a Map or Layer Package

Compresses selected data for a whole map into a single map or layer package that makes it easy to share.

Create a GeoPDF

A GeoPDF is a geospatial extension to a PDF that is used to present GIS and mapping data in a format that almost anyone can open.

Export Results List

Exports search results and their attributes as a CSV file, XML file or Esri Shapefile.

Add to a Geodatabase

Adds selected search results to an existing geodatabase.

Publish to Portal for ArcGIS

Converts static desktop maps into published Map Services on ArcGIS Portal.

Publish to ArcGIS Server

Converts .mxd, .mpk., .lpx, .lyr, feature classes and raster data sets into published Map Services.

Mosaic

Knits together selected raster data sets into a new raster that can be downloaded.

Build Raster Pyramids

Builds pyramids for raster and mosaic data sets to improve the display when you are not working with the full resolution.

Mosaic to Workspace

Mosaics input rasters to a new data set in an existing workspace.
